

# Renewable Vehicle Refueling Station

*Modern Transportation Infrastructure*

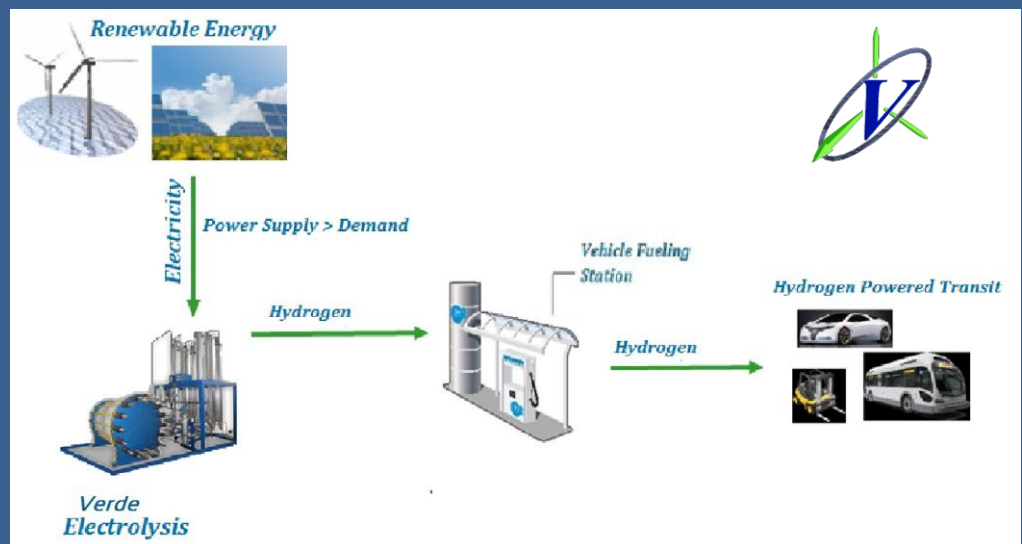

## Solutions For a New Economy

Market demand has driven a fossil fueled based economy for nearly 200 years now. The inherent flaws with a limited number of fuels available to power an ever growing number of industries and world population has forced demand of a new energy infrastructure. Driven by a worldwide need for cleaner, renewable energy, hydrogen powered vehicles are the modern solution to rising fuel costs and pollution. A healthier, more sustainable transportation fuel, hydrogen has been the subject of countless research and development in the last 5 years. Today, the costs of hydrogen transportation have decreased to a point where the technology is being accepted as a market based energy solution.

## VERDE Renewable Hydrogen Fueling Station

- 1) Utilizes Renewable Power to support off-grid, fueling network
- 2) Single system capacity fits easily in a small, commercial environment
- 3) Containerized system enables easy installation and retail experience
- 4) Low operating and maintenance costs
- 5) Auto-controls minimize user input and maximize safety
